

Sangamo is a genomic medicine company that seeks to help millions of people who suffer from severe diseases for which today's medicine can only offer symptom management at best. Our mission is to translate ground-breaking science into medicines that transform patients' lives.

We are passionate about our science and driven by the purpose it serves. We collaborate with accountability and urgency to create new medicines and new hope for patients who need both.

Pioneering the future of genomic medicine

Our proprietary zinc finger technology and deep scientific expertise are advancing genomic science. We are one of the few companies pursuing programs across the spectrum of genomic medicine, with gene and cell therapies in the clinic today and preclinical programs in emerging areas of genome engineering and off-the-shelf cell therapy, which we believe represent the future of genomic medicine. The rare disease clinical and preclinical programs in our promising pipeline feed insights across our portfolio and pave the way for use of our technologies across larger patient populations.

We are strategically focused on serious conditions with high unmet patient need and where our technology has the potential to create first- or best-in-class medicines. Our partnerships with leading global pharmaceutical companies help us deliver on our mission to get new medicines to patients by extending the reach of our technology into new therapeutic areas that expand our addressable markets and provide revenue to fuel our science and our evolution to a fully integrated biopharmaceutical company.

Our genomic medicine manufacturing capabilities

Our investment in world-class manufacturing capabilities gives us the advantage of greater control over timelines, quality and supply for our robust pipeline.

We have a state-of-the-art cGMP AAV manufacturing facility and trusted CDMO partner that together will support Sangamo's diverse pipeline now, and in the future.

About our people and culture

We are at a critical juncture in both genomic science and the history of Sangamo. Ideas that were once just hypotheses are being tested in the clinic and we are rapidly moving closer to a day when research will deliver medicines. The electricity of the moment is palpable in everything that we do. Our diverse and inclusive teams are built to enable passionate individuals to contribute to meaningful, measurable innovations that advance the field of genomic medicine and Sangamo's success.

We have offices in four locations:

Bay Area, CA, USA
Headquarters

Richmond, CA, USA
Research Laboratories

London, UK
UK Clinical Team

Sophia Antipolis, France
French Subsidiary
